

Weekly Report

06/15/2015-06/21/2015

Research

This week, I make a report about the basic concept of cluster analysis with three simple algorithms, K-means, DIANA and DBSCAN. I close the projection view in our code and Zhaoxin makes some change in our system such as encoding the size of node with color instead of height. Finally, I record a video to illustrate our system.

Plan for next week

- Learn graphical models.
